Geothermal Well Test Analysis, 2019.

3.9 Summary. Geothermal wells are larger in diameter than wells drilled by all other industries, and they require specialised drilling practices.

Geothermal wells are also designed and completed differently depending on the type of geothermal system and the intended well utilisation.

Dug wells have a large diameter, are shallow, and are not cased continuously. Driven wells are constructed by driving pipe into the ground. Driven wells are shallow and cased continuously. Drilled wells are constructed by percussion or rotary-drilling machines. Drilled wells can be hundreds to thousands of feet deep and use continuous casing.
