Exim The Mail Transfer Agent

Exim is a message transfer agent (MTA) developed at the University of Cambridge for use on Unix systems connected to the Internet. It is freely available under the terms of the GNU General Public Licence. In style it is similar to Small 3, but its facilities are more general. There is a great deal of flexibility in the way mail can be routed, and there are extensive facilities for checking incoming mail.

Exim Internet Mailer

The Exim mail-handling daemon is just as capable as the old stalwart of handling everyday electronic mail duties, and far easier to administer. With a style and polish that's typical of the blue-cover series of system administration books from O'Reilly, Exim: The Mail Transfer Agent shows how to set up and use Exim.
