HC-03/05 Embedded Bluetooth Serial Communication Module AT ...

HC-04 and HC-06 are former version that user can't reset the work mode (master or slave). And only a few AT commands and functions can be used, like reset the name of Bluetooth (only the slaver), reset the password, reset the baud rate and check the version number.

Where to use HC-05
Bluetooth module. The
HC-05 is a very cool
module which can add
two-way (full-duplex)
wireless functionality
to your projects. You
can use this module to
communicate between
two microcontrollers
like Arduino or
communicate with any
device with Bluetooth
functionality like a
Phone or Laptop.

HC-05 has red LED which indicates connection status, whether the Bluetooth is connected or not. Before connecting to HC-05 module this red LED blinks continuously in a periodic manner. When it gets connected to any other Bluetooth device, its blinking slows down to two seconds. This module works on 3.3 V.
